WO 2004/110899

## CLAIMS

1. A multi-compartment dispenser comprising a deformable outer container body having a plurality of mutually separated compartments for separately storing desired 5 dissimilar materials which may have different viscosities, the compartments being separated by at least one elastic partition, with each compartment being provided with a discharge outlet adapted to provide a discharge aperture 10 of an area proportional to the resistance to flow raised to an exponent whose value is greater than zero, said resistance to flow being of the material to be discharged from the respective compartments for controlled discharge of dissimilar materials from the discharge outlets.

- 2. The multi-compartment dispenser of claim 1 wherein the area of the discharge aperture of each compartment is directly proportional to the ratio in which the material is required to be discharged with respect to the materials contained in the other compartments.
- 3. The multi-compartment dispenser of claim 1 or claim 2
- wherein adjacently facing members of the respective compartments are sealed together with the partition, and the outer deformable body portions of the adjacent compartments are sealed together to define the deformable container outer body.
- 4. The multi-compartment dispenser of any preceding claim 30 wherein the area of the at least one partition is equal to

- 14 -

or greater than the cross sectional area of the container along the partition.

- 5. The multi-compartment dispenser of any preceding claim wherein the at least one partition is corrugated.
  - 6. The multi-compartment dispenser of any preceding claim wherein there are a plurality of elastic partitions.
- 7. The multi-compartment dispenser of any preceding claim wherein the deformable outer container body is not collapsable.
- 8. The multi-compartment dispenser of any preceding claim wherein the dispenser is hand-held.
  - 9. The multi-compartment dispenser of any preceding claim wherein the exponent has a value between 0.1 and 5.
